

## User Manual for Schmaps.

Congratulations to your download of the application Schmaps! In this manual, we will help you get started with your app so you can start finding your way around campus!

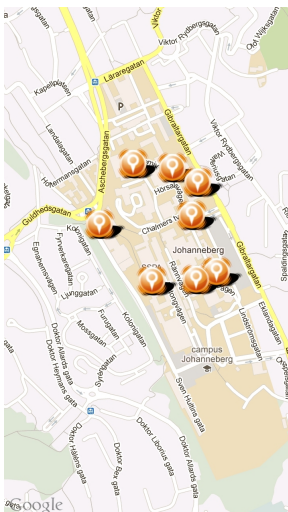

When the app starts the first thing to happen is that a splash screen will be put on display for a few seconds. You can skip the splash screen by pressing on the screen when the splash start to show. When the splash screen closes down a menu appears with the different options the application offers.

To start and use a function from the application you just have to touch any of the menu options accordingly to what you want to do. The different options are:

### Search lecture hall:

If you touch this option you will be presented with a view of a map and a text field, you can use the text field to enter the lecture halls you want to find. To find a lecture hall you gently touch the text field and enter the name of the lecture hall you want to find and then the map will draw and animate to the location you want to find. To get extra information about the hall you searched for just click on the position that was drawn on the map. To get a path drawn from your current location to the hall just click on the button "Get Directions".

### Find microwaves:

If you touch this option you will be asked to choose what campus you want the microwave oven locations drawn out on. After you've chosen the campus a map view will be displayed and all the microwave oven locations will be drawn upon it. To display information like which building and level the microwave is located in just touch the location you want information about and a dialog will appear with the info you requested.

### Find restaurants:

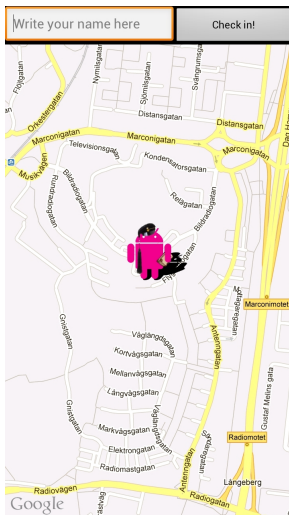

The function works in the same manner as microwaves, you will get restaurants displayed instead of microwave ovens.

### ATMs:

Works the same as Find microwaves and Find restaurants, the locations drawn on the map will be of ATMs instead.

### Book study rooms:

Touch this option and the application will open a web browser and navigate to the Time Edit webpage where you can log in with your CID and password to use their function to book a study room.

### Check-in:

If you touch this option you will be presented with a view of a map and a text field, you can use the text field to enter a name and check in. If you leave the text field empty you will be checked in as unknown. On the map you will see people that have checked in earlier. You can touch the icon and get the “name” and the time of the person that checked in.

Departures from Chalmers to Lindholmen			
Buss	Destination	Departure	Track
Buss 16	Eketrågatan	13:08	A
Buss 16	Eketrågatan	13:22	A

Refresh

### Check buses:

Touch this option and the application will display the next eight departures. The first table shows the departures from the bus stop Chalmers(Campus Johanneberg) to bus stop Lindholmen(Campus Lindholmen). The second table shows the departures from the bus stop Lindholmen(Campus Lindholmen) to bus stop Chalmers(Campus Johanneberg). There's also a button “Refresh” that refreshes the tables.
